

Information served to the customer through the Internet is immediate and customer-defined. Customers are able to receive location reporting, security alerts, reporting analysis, remotely manage locks, immobilization, and two-way messaging.

Safefreight's software applications are designed to be easy to use and cost-effective, and allow for the secure and efficient management of drivers and vehicles. We offer a strong value proposition by integrating tracking, telematics, and sensory information to provide mobile asset security and interactive asset management.

## PRODUCT OFFERING

Safefreight Technology specializes in advanced fleet management for security, monitoring and tracking of mobile assets. We are committed to developing customized security and asset management solutions to meet specific customer requirements and wrap around existing technologies.

By applying our custom fleet solutions, we help clients stay connected to their mobile assets to maximize their competitive advantage. Our SmartFleet™ System delivers the tools clients need to support driver safety, reduce operating costs, and maximize ROI by measuring asset productivity and security. Through our innovative programs and strategies, we can help clients meet their business objectives and improve operational efficiencies. Our goal is to ensure that, together, we understand the potential benefits and impact of this initiative and the investment that it requires.

### FEATURES

Optimize fleet management and cargo security through Safefreight's

**SMARTFLEET™** SYSTEM:

- **24/7 Situational Awareness.** Track the location and movement of mobile assets through real-time mapping, and monitor driver behavior and vehicle-use to enhance fleet operations.
- **Security Alert Notification.** Immediately notifies key contacts when onboard sensors including tamper, unauthorized movement, volumetric, and temperature are triggered.
- **Enhanced Route Planning & Boundary Notification.** Plan more efficient routes for optimal travel times and set a digital perimeter around specific roads to receive alerts if a vehicle deviates from its prescribed route.
- **Remotely Control Assets.** Disable a vehicle and lock trailer devices to prevent unauthorized use and access through wireless intervention.
- **24/7 Security Monitoring & Response.** Emergency call centers provide mobile response and security surveillance services through monitoring centers.
- **Improved Asset Maintenance.** Productivity reports summarize important asset information to identify key milestones to maintenance such as working hours, idle time, trip details, and vehicle history summaries.

# PRODUCT SUMMARY

Information served to the customer through the Internet is immediate and customer-defined. Customers are able to receive location reporting, security alerts, reporting analysis, remotely manage locks, immobilization, and two-way messaging.

Safefreight's software applications are designed to be easy to use and cost-effective, and allow for the secure and efficient management of drivers and vehicles. We offer a strong value proposition by integrating tracking, telematics, and sensory information to provide mobile asset security and interactive asset management.

## OUR SOLUTION

Designed for the management and security of fleet assets, the SmartFleet™ System features:

- **SecurityGuard™ - On-board hardware** : A rugged, smart device that includes a GPS receiver, firmware and a radio for network communications (terrestrial and satellite technologies). Additional enhancements can be incorporated into the device, such as sensors (i.e. door openings, temperature, smoke, volumetric, brake wear) and output devices such as sirens and immobilizer keypad for local alarm activation. Safefreight can rapidly adapt its hardware to meet the needs of different applications and a variety of communication networks around the world.
- **SmartFleet™ Manager - Enterprise client application**: A powerful web-based application that provides a variety of information to the customer from the mobile asset. The information is received immediately and is defined by the customer through business rules set within the application. It includes location reporting, security alerts, multi-point routing, security arm/disarm, temperature alert, diagnostic information, remotely managed locking and immobilization, two-way messaging, custom reports and more. The application serves as a useful forensic tool.
- **SafeAlert!™ - Emergency and support services**: A suite of value-added customer services, including response center application, emergency call center services, customized reports, installations, training and more.

## CUSTOMER ROI

Safefreight's custom security and fleet management solution provides a client with the tools needed to manage assets to their fullest potential and delivers a solid return on investment (ROI). Our solution allows clients to:

- Maximize fleet productivity with asset-centric monitoring and reporting based on business objectives;
- Fortify driver, vehicle, and cargo security that will minimize losses and decrease insurance premiums;
- Minimize disruption of the supply chain;
- Enhance customer relations through better performance metrics.
