

# TELUS Internet Fax

North America's leading IP fax service

## the smart way to fax

You know firsthand the frustration of fax machines – busy signals, paper jams, time spent printing. Now there is a more convenient and reliable way to send and receive documents – TELUS Internet Fax. This service allows you to send and receive faxes by e-mail. It eliminates the need for fax machines, fax modems, fax/phone lines and long distance charges for faxes. And it's simple. You do not have to worry about additional hardware or software. Nor do you have to worry about maintenance costs.

## the benefits of simplicity

Discover the advantages of TELUS Internet Fax:

**Improve productivity.** Employees are able to focus on their primary job responsibilities instead of wasting valuable time sending, receiving and filing paper faxes.

**Enhance mobility.** TELUS Internet Fax can follow employees wherever they have access to e-mail – at the office, at branch offices, on the road.

**Save money.** With TELUS Internet Fax there are no upfront investments in hardware and software. Employee time is not spent on managing the systems and there are no ongoing telecom and maintenance costs

**Ensure reliability.** TELUS Internet Fax is a carrier-class 'fax telco'. We have enough capacity to guarantee uptime and to handle any spikes in usage and traffic. Your employees, customers, suppliers and other stakeholders will be able to send and receive faxes without busy signals or dropped calls.

**Gain scalability.** TELUS Internet Fax provides organizations with real-time fax on demand service – no lead time is required to extend fax functionality to new user groups or to integrate fax functionality into systems. Organizations operate in a fast paced 'on demand' environment and your business can't afford to wait for its in-house fax infrastructure to catch up.

**Gain flexibility.** TELUS Internet Fax provides your organization with maximum flexibility to adapt to constantly evolving business, operational and IT realities. The service can be used by individual employees to send and receive faxes via e-mail. It can be quickly integrated into systems such as ERP and CRM. TELUS Internet Fax can be easily turned on or off for any user group or system.

**Ensure security.** For many organizations, a high percentage of information continues to be transacted by fax. The reality is that paper faxes have a much higher degree of vulnerability than electronic faxes – paper is harder to route to the right parties, harder to track, harder to find, harder to secure. TELUS Internet Fax provides your organization with control over its fax communications by transitioning from paper fax to electronic fax.
